

## PEST-STOP

Serious about pest control

### electronic mouse killer

- ✓ Kills mice through electric shock
- ✓ Easy to dispose of dead mice
- ✓ Quick humane kill
- ✓ New & improved design

#### DIRECTIONS

1. Switch OFF ("O") and remove batteries.
2. Open the kill chamber door and bait trap with pea-sized amount of peanut butter in the bait cup only. Bait touching metal may cause malfunction.
3. Place the trap on a clean, dry surface along a wall, making sure the side with the rodent entrance is against the wall.
4. Insert 4 "AA" batteries. Turn the switch to the ON ("I") position. The green light will flash and the unit will buzz to indicate the unit has been enabled.
5. Rodent Caught: Green light (flashes one week).
6. Low Battery: Red light.
7. Rodent Disposal: Turn the switch to OFF ("O") and remove batteries. Open the kill chamber door and properly discard of rodent. Follow cleaning instructions.

#### CLEANING INSTRUCTIONS

Cleaning is only needed when debris is on the metal plates. It is not necessary to clean the trap after every use.

1. Separate Units: Power OFF ("O") and remove batteries. Hold as shown. Push chamber forward.
2. Clean Chamber: Use warm water, soft bristle brush, and hydrogen peroxide topical solution only. DO NOT get water on electronics.
3. Dry chamber: Allow interior and exterior to air dry completely.
4. Dry hands thoroughly.
5. Reassemble: Insert keys into matching openings. Pull chamber backwards.
6. Follow trap operation instruction steps 1-7.
